

CUSTODY, BROKERAGE & ACCOUNT ONBOARDING

CROSS-BORDER EXECUTION PLAYBOOK FOR HUMANOID ROBOTICS HARDWARE ASSETS

1. Executive Overview & Cross-Border Account Architecture

Deploying capital into the recommended **Quadrant 1 Humanoid Robotics Actuator Portfolio** requires direct execution access across four distinct global equity jurisdictions: **Mainland China A-Shares** (Shanghai/Shenzhen), **Japan** (Tokyo), **South Korea** (Seoul), and the **United States** (NYSE). Because component suppliers operate across diverse Asia-Pacific markets, establishing a multi-currency custody and trading structure is essential prior to capital infusion.

Target Execution Platforms & Clearing Routes

- **Primary Institutional Platform (Interactive Brokers - IBKR):** Provides integrated direct access to HKEX Stock Connect (Northbound), TSE, KRX, and NYSE from a single master account.
- **Secondary Brokerage Desks (Charles Schwab / Fidelity International Desks):** Ideal for North American institutional custody, supporting JPY, KRW, and USD execution.
- **Regional Asian Custody Desks (HSBC / FUTU / BOC International):** Native HKEX Stock Connect clearing for direct China A-share settlement.

2. Target Asset Symbol & Exchange Routing Matrix

The table below details the exact exchange tickers, native settlement currencies, clearing channels, and target portfolio allocations for the recommended companies:

Company Name	Ticker Symbol	Primary Exchange	Currency	Clearing / Access Channel	Weight
Ningbo Tuopu Group	601689.SS	Shanghai Stock Exchange	CNH (Offshore)	HKEX Stock Connect (Northbound)	30.0%
Zhejiang Sanhua Controls	002050.SZ	Shenzhen Stock Exchange	CNH (Offshore)	HKEX Stock Connect (Northbound)	25.0%
Inovance Technology	300124.SZ	Shenzhen Stock Exchange	CNH (Offshore)	HKEX Stock Connect (Northbound)	20.0%
HL Mando	204320.KS	Korea Exchange (KRX)	KRW (Won)	Global Desk / Direct KRX Access	10.0%*
Moog Inc.	MOG.A	New York Stock Exchange	USD (\$)	Standard US Equities Desk	5.0%*
Harmonic Drive Systems	6324.T	Tokyo Stock Exchange	JPY (Yen)	Direct TSE Equity Desk	10.0%

**Note: HL Mando and Moog Inc. collectively form the 15% Western OEM / Defense actuator hedge.*

3. Step-by-Step Account Opening & Compliance Checklist

- **Step 1: Entity Identification & Documentation Preparation**
Gather primary identification documents: Government Passport / State ID for individuals; Articles of Incorporation, Operating Agreement, and Authorized Signatory Registry for institutional funds or SPVs.
- **Step 2: Tax Agreement Sign-off (W-8BEN / W-9 / FATCA)**
Complete IRS Form W-8BEN (foreign individuals/entities) or W-9 (US entities) to ensure appropriate treaty withholding tax rates apply across foreign cross-border dividends.
- **Step 3: Enable International Trading & Stock Connect Permissions**
Log into the brokerage portal (e.g., IBKR Account Management → Trading Permissions). Activate permissions for *Japan (TSE)*, *South Korea (KRX)*, and *Hong Kong Stock Connect (Northbound A-Shares)*. Sign the mandatory HKEX Stock Connect Risk Disclosure.
- **Step 4: Multi-Currency Account Funding & Currency Conversion**
Wire initial capital in USD or HKD. Execute spot FX currency conversions within the platform to maintain balances in **CNH** (Offshore Yuan for China A-shares), **JPY** (Yen for Japan), and **KRW** (Won for Korea).
- **Step 5: Order Routing & Trade Execution Protocol**
Submit **Limit Orders** during local exchange operating hours to prevent price slippage. Align order submission with target Asian market windows (09:30–15:00 CST for China; 09:00–15:30 JST for Japan).

4. Regulatory, Tax & Settlement Considerations

- **Dividend Withholding Tax:** Mainland China A-shares traded via Northbound Stock Connect are subject to a standard **10% dividend tax** withheld at source by ChinaClear.
- **Settlement Cycles:** China A-Shares operate on a **T+0 equity / T+1 cash settlement** cycle, whereas Japanese (TSE) and US (NYSE) equities operate on **T+1 settlement**.
- **Stock Connect Daily Quotas:** Northbound Stock Connect is subject to a daily aggregate quota cap (RMB 52 Billion/day). Utilizing limit orders prevents trade rejections during peak market volume windows.
